

IN THE SPECIFICATION:

Before paragraph 0001, please insert the following:

RELATED APPLICATIONS

The present application is a continuation of, and claims priority from, U.S. Patent Application No. 10/133,616, filed April 26, 2002, which is incorporated herein in its entirety.

Please amend paragraph 10 as follows:

[0010] FIG. 1 is a side view of an inkjet print head servicing station shown in a first position according to one embodiment of the present invention. FIG. 1a is a side view of an inkjet print head servicing station according to another embodiment in which the wiper has a twisted or helical shape.

Please amend paragraph 30 as follows:

[0030] Wiper 38 may extend radially from rotatable shaft 36 in a substantially straight manner as in the configuration shown in FIG. 1, but this is not necessarily so. Wiper 38 may also include a twist or partial helical shape, as shown in FIG. 1a, to facilitate wiping across orifice surface 24 with less torque than may otherwise result with a straight wiper. The wiping of orifice surface 24 by wiper 38 is discussed in more detail below.
